The DIPROSONIC DUS-300 is the new and improved Ultrasonic Finishing System from Diprofil. The Ultrasonic system's main advantage is its very short stroke length (10 – 35 µm) at a very high frequency (18 – 25 kHz). This makes this unit ideal for working in narrow and confined spaces such as cavities and slots where a short stroke length is preferable. For this kind of delicate work, the DIPROSONIC will give you precise finishing with rapid stock removal in a relatively clean environment without the need for lubricating fluids etc. The Unit is excellent for use together with Ceramic Fibre Stones and Sintered Diamond Files, but it is also possible to use Electroplated Diamond Files as long as the shank of the used tool is kept as short as possible. Operation is optional by hand or the included Foot-switch and the Unit will automatically find the right frequency for each tool.
